

Bastrop County MUD No. 1
2306 RR-620 N. Austin, TX 78734
512.402.1990

June 6, 2025

Dear Customer,

Aqua Water Supply Corporation (AWSC), the supplier of potable water to Bastrop County MUD No.1 (BCMUD1), has moved to Stage 1 of their drought management program. As such, BCMUD1 has also moved to Stage 1 effective immediately to help with water conservation.

Stage 1 voluntary watering restrictions limit all outdoor water use, including but not limited to, automatic hose end irrigation, to a **maximum of 2 days per week, on assigned watering days**. In addition, outdoor watering should only take place between the hours of **midnight to 10am and from 8pm to midnight**. Please see the watering schedule below and set your controllers for your assigned days and times.

BASTROP COUNTY MUD NO.1	
STAGE 1 DROUGHT WATERING SCHEDULE	
<u>ADDRESSES ENDING IN:</u>	<u>DAYS TO WATER:</u>
EVEN NUMBER	MONDAYS & THURSDAYS ONLY
ODD NUMBER	TUESDAYS & FRIDAYS ONLY
***NO WATERING** SATURDAYS, SUNDAYS, OR FEDERAL HOLIDAYS	

Under Stage 1, the goal is for the district to conserve a minimum of 10% of its normal, non-drought use.

Below are some helpful tips to conserve water:

Plant native, drought-tolerant plants

- They need less water.
- They require less maintenance and once established, they grow in most conditions as long as they have light.
- They attract pollinators such as butterflies and bees.

Irrigation system

- Ensure the system is set for the right days and times.
- Check for leaks and broken sprinkler heads.
- If you have an electronic water meter, sign up for an EyeOnWater account and set leak alerts.

Check for leaks inside your home

- Leaking toilets and shower heads can waste between 2,000-20,000 gallons per month depending on the leak.
- Drop food coloring in the back of a toilet tank. If the coloring empties into your toilet bowl after 10-15 minutes, you have a leaky toilet.

For more helpful information on water conservation, visit the district's website and click on the conservation tab.
